DETAILED ACTION

Claim Rejections - 35 USC \$ 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shinmei et al. (Shinmei), U.S. Patent 6,248,226 in view of Denoncourt et al. (Denoncourt), U.S. Patent 5,593,563.

Shinmei discloses the claimed method and apparatus for the electrodeionization, including the improvement of single-pass counter-flow

Art Unit: 1753

concentration and deionization water, wherein the concentrated water would include at least silica at a lower concentration than the raw water (see figure 1, claims 1-6 and col. 6, lines 35-60). The reference further discloses such limitations as flow rates, the pretreatment of the water as recited in claim 3, the use of a porous spacer as recited in claim 5 and appears to teach the similar current efficiency using the formula claimed (see examples 1-2 and columns 6-8).

The reference fails to disclose the discarding of at least a part of the concentrated water and the use of the materials in the electrode compartments. The Denoncourt patent is cited to show the discarding of at least a part of the concentration (see col. 6, lines 55-60). The reference further discloses the use of the materials used in the electrode compartments (see claims 1-10).

Consequently, the invention as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the disclosure of the Shinmei patent with the teachings of the Denoncourt, because the Denoncourt patent teaches that such modification produces the improvements disclosed therein.

Application/Control Number: 10/024,291

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arun S. Phasge whose telephone number is (703) 308-2528. The examiner can normally be reached on MONDAY-THURSDAY, 7:30-6:00.

Conclusion

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nam X Nguyen can be reached on (703) 308-3322. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9310 for regular communications and (703) 872-9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0661.
